The website crash may occur because of a caching issue. In this case, users can access the site, but it fails to load on your end.

To fix it, clear the browser cache and refresh the page.

Alternatively, change to a different network.

There are several reasons a website can crash, including broken code, malicious attacks and hosting errors.

Another big reason websites can go down is massive traffic. Every website can crash, but knowing what caused the crash can help you fix it quickly.
